

CLASS TASK ONE

- 1 As a follow up on the general research assignment that is due Thursday, classify it as at least one type of the research classifications we have looked at. You could categorize it as more than one ofcourse.**

The research topic is based on how pornography affects the brain, behavior and health of teenagers.

Basic research is driven by scientists curiosity or interest in scientific question. According to the research topic, pornography triggers mirror neurons in the male brain which are involved with the process for how to mimic a behavior and cause arousal which leads to sexual tension.

Analytical research uses facts that are already available and analyses them to make a critical evaluation on the material. Based on the research topic, teenagers are higher targets of pornography especially the males and teenagers who have seen a significant amount of porn are more likely to start having sex sooner and with more partners, to engage in riskier kinds of sex that put them at greater risk of getting sexually transmitted infections, and to have actually contracted a Sexually Transmitted Infection.
